

B.4 HANDLING POLYSTEEL FORMS

Proper handling and storage of PolySteel Forms is necessary to prevent damage or deterioration and ensure that you are installing forms in good condition. PolySteel Forms are typically delivered to and from our Dealers in packaged bundles. The bundles are secured together with the tongues and grooves of the forms locked together and bound with a clear plastic stretch wrap. The top of the bundle may be covered with an opaque UV-resistant plastic sheet and the bottom protected with a sheet of corrugated cardboard. They may arrive on an enclosed truck, direct from a manufacturing facility, or in partial loads on a trailer from your Dealer.

Bundles may be maneuvered by hand within an enclosed trailer and then transported with a forklift, hand truck, or lifted by two to four people.
